

TIMBERWISE

Case Study: Domestic Basement - Stoneygate

Timberwise are well known for providing waterproofing solutions to commercial clients but did you know we also help domestic clients with troublesome basements?

When a family with a property in Stoneygate, Leicester decided that they needed extra space for their property they chose Timberwise to make their dreams a reality and convert their damp unused basement. What was needed was a new lounge and home office - and, working closely with the client, Timberwise helped turn their plans into the extra space that they craved.

Before work could commence the existing basement had to be stripped out prior to the installation of a thermal dry cavity drain membraning system to the walls and a tougher membrane to the floors. This would enable carpet or wood flooring to be laid without fear of moisture spoiling the furnishings.

The increased 'U' value of the thermal dry cavity drain membrane gives it an edge over standard wall membranes. Keeping heat where you need it most - in the basement !

3 separate areas along with new plumbing and electrics were created. Finally replastering was carried out to the walls and ceilings allowing the client to then finish the project by decorating to suit their tastes.

The delighted client now has a basement to be proud of that benefits not only from our waterproofing expertise but a long term guarantee as well.

Timberwise recommend that all basement installations receive an annual 'Check & Clean' to ensure that the waterproofing system remains in peak condition.

To arrange a 'Clean & Check' call the Basement Sump & Pump Co on 0800 019 9949
