The Timberwise Super Value Mould Removal Kit is designed to kill mould growth on walls, ceilings, window reveals, frames, doors, skirting boards etc.

These instructions need to be followed carefully. With each stage it is vital to treat the visible mould PLUS 1 metre beyond the signs of surface growth.
Mould Removal in 3 Easy Steps

TREATMENT: Super Value Mould Killer and Steriliser Application

STEP 1
Spray the Mould Killer directly onto the affected surface from a distance of 3 – 5 cms

STEP 2
Rub the treatment into the surface using the application sponge provided and if necessary, use the scotch pad for tougher areas. Allow approx 30 minutes for the treatment to take effect then rinse with warm, soapy water. If necessary, repeat steps 1 and 2 until all visible signs of mould have been removed

PREVENTION: Super Value Mould Paint Additive

STEP 3
Add the 100ml Paint Additive to 5 litres of your chosen colour of water-based paint (emulsion, silk, vinyl or matt).

Alternatively, add 50mls of Paint Additive to 5 litres of solvent based primer, undercoat or gloss. Stir in the Paint Additive for at least 1 minute or until fully dispersed. Apply paint in accordance with the manufacturer’s instructions.

Health and Safety

Use biocides safely. Always read the label and product information before use.

Mould Killer and Steriliser Application - HSE No. 9453
Contains Benzalkonium Chloride 0.95%, 2 -Phenylphenol 0.24% w/w

Paint Additive - HSE No. 7656
Contains 3-Iodo-2-Propynyl-n-Butyl Carbamate 14.85% w/w
